

KATALIN CZÉDULÁS

ELTE Apáczai Csere János Secondary School

Address: Papnövelde u. 4-6., H-1053 Budapest, Hungary

TEACHING CAREER IN BRIEF

I obtained my degree in Biology and Chemistry Teaching at the Faculty of Science of Eötvös Loránd University. I began my career at the ELTE Apáczai Csere János Secondary School, where I have been working ever since. Since 1999 – except for a two-year break – I have continuously been a form teacher, and for 10 years I also served as deputy headmaster. From 2003 I became a mentor teacher in Chemistry, and a few years later in Biology as well, regularly supporting trainee teachers during their teaching practice. Since 2003, I have been teaching advanced and specialized groups in both of my subjects. Among my students are dozens of medical graduates and medical students, as well as many who continued their studies in other areas of health sciences, veterinary medicine, or biology. In the National Secondary School Academic Competition (OKTV), 10 of my students so far have ranked between 1st and 40th place in Biology. Since 2020, I have regularly carried out tasks for the Educational Authority (OH) related to the subject of Biology. For 17 years, I held group preparatory courses for the school-leaving examination (matura). Since January 2016, as part of my master teacher program, I have been developing materials to support biology teaching and exam preparation. As the number of lessons allocated to natural sciences—including Biology—has significantly decreased due to educational reforms over the past 10–15 years, it is especially important today to maintain high school students' interest in the subject and to provide as many opportunities as possible for them to engage with the practical aspects of biology and medicine. For this reason, I was glad to join the NTA's high school program.
