

KRISZTINA FUTOSI

Semmelweis University
Department of Physiology

Address: Tűzoltó u. 37-47., H-1094 Budapest, Hungary

RESEARCH AREA

Present research field: Characterisation of stem cells of dental origin, studies on tissue regeneration-, differentiation capacity and immunomodulatory effects in vitro; studies on the structural and functional differentiation of the salivary gland and its secretion and transport processes. Development of a 3D cellular model of the ameloblast, studies on its structural and functional differentiation, secretion and transport processes. Covid research. previous research field: Functional neuroanatomy of the neuroendocrine hypothalamus, mapping of stress-related CNS networks; neurobiological effects of drug withdrawal, role and effects of histamine in the regulation of feeding (nutrition).

TECHNIQUES AVAILABLE IN THE LAB

Cell culture (primary cell culture), 3D cell culture (membrane, scaffold, organoid) molecular biology methods: real-time PCR, iPSC, *in situ* hybridisation, northern blot, PCR, gel shift assay, plasmid design, western blot, immunocytochemistry/immunohistochemistry, short-circuit current measurement, experimental design, animal experiments (rat, mice), animal surgery (e.g. adrenalectomy, lesions), isotope labelling techniques.
