

# TAMÁS JUHÁSZ

**University of Debrecen  
Faculty of Medicine  
Department of Anatomy, Histology and Embriology**

**Address:** Egyetem tér 1., H-4032 Debrecen, Hungary

## RESEARCH AREA

Mapping the signaling pathways involved in cartilage development and understanding the signaling changes caused by osteoarthritis. A narrower research interest includes a more detailed study of the neuropeptide PACAP and its effects on cartilage development and during mechanical stimulation. Furthermore, the potential protecting effects of PACAP on cartilage injuries are continuously being investigated in rat and mouse models, as well as human samples

## TECHNIQUES AVAILABLE IN THE LAB

Procedures for tissue culture, high density cultures, establishment of limb bud tissue cultures, induction of osteoarthritis in rat and mouse models.

Molecular biology techniques:

Western blot, RT-PCR, Q-PCR, proliferation and viability assays, enzyme activity measurements.

Histological examinations and stainings, use of confocal microscope, polarization microscope, and light microscopes.
